CST Environmental Taking Disaster Relief By Storm

Introducing CST Environmental:

CST Environmental has been operating as a demolition and environmental remediation contractor since August of 1988.

Over the last twenty years, CST has grown from its west coast headquarters to several locations spanning across the United States. Our company has worked in over thirty states and is licensed as a demolition contractor and certified in asbestos, lead and mold remediation nationwide.

20 JUNE 2008

What CST Can Do For You:

CST has two decades of experience, a wealth of resources and equipment, as well as the man power to get the job done. In a time of disaster, CST can provide a quick and efficient response to assure that the assistance that your company needs is received and the issues that demand work and repair are addressed. Additionally, CST has been awarded and recognized for our environmentally friendly techniques of demolishing and renovating projects.

Winning the Waste Reduction Award 2008

Our New Focus on Disaster Relief:

CST has recently transitioned from an incorporation to a newly formed partnership with Nuprecon. In light of all of the positive changes that have happened with this process, CST has gained a second team of resources, knowledge, equipment, and man power. Our management teams have worked hard to explore the new possibilities and directions available to our companies. Recently, it was decided to make a more substantial move into disaster relief, where our experience and environmental conscientiousness can be put to its best. CST Environmental, LP will be opening its first disaster relief headquarters in Saint Louis, Missouri this year. **Please open the attachment to this email to read more about the resources that CST Environmental can make available to you during a time of need.** We look forward to our new endeavors and hope that we can truly use our capabilities and expertise to make a difference!
